

Hadsund Produktionssskole is situated near by the beautiful Mariager Fjord in the northern part of Hadsund. We are 13 qualified employees with relevant educations, and the school accommodates up to 60 students.

*Hadsund Produktionssskole* is an independent institution under the Ministry of Education, and has, since 1992, continuously developed its workshops and education-offers, which are addressed to students in the ages 16 to 25.

Students can make use of our educational offer when:

- Under the age of 25 and having completed the 9 years' of compulsory school attendance.
- Having no immediate qualifications to start an ordinary education.
- Having dropped out of an ordinary education, without having completed one.

During a stay at Hadsund Produktionssskole, the student can be offered a work placement I a company for a two-week trainee period and will get an individual and continual educational counselling.

In our workshops we focus on developing the students' technical qualifications as well as personal competences. This is implemented in everyday-life in the form of teamwork, conflict-handling and a general edification of the students self esteem which gives them a solid foundation from which to build an education.

## **A short presentation of our workshops:**

Education: The school offers classes in Danish, English and mathematics.

The tutoring will be programmed to suit the student's individual needs and capabilities. A personal computer can be provided as reading-aid.

Creative workshop: The students get to work with materials such as textile, glass, leather and willow and simple production and design of trinkets. Orders from customers are being executed and the workshop sells the goods through its own shop at the school as well as in various stores around Hadsund.

Metal workshop: The students get an interesting introduction into the metal-working craft. Orders from customers are being executed and sold through the shop. Besides that, the students get better equipped to take on a regular job, by being offered to take welding certificates among other things.

Service workshop: Does a lot of work on school property. Maintenance, cleaning and small repairs of the buildings are some of the main assignments. The workshop is also in charge of a small kitchen section, which services the teachers, students and guests with breakfast, coffee and tea.

Nature and woodcraft: From simple pieces of woodcraft (wooden bus-stops and scout huts) to various outdoor activities, this workshop offers a lot of challenges for the students.
